

16-bit Proprietary Microcontroller

CMOS

F²MC-16FX MB96350 Series

MB96F353/F355 *1

MB96F356

■ DESCRIPTION

MB96350 series is based on Fujitsu's advanced 16FX architecture (16-bit with instruction pipeline for RISC-like performance). The CPU uses the same instruction set as the established 16LX series - thus allowing for easy migration of 16LX Software to the new 16FX products. 16FX improvements compared to the previous generation include significantly improved performance - even at the same operation frequency, reduced power consumption and faster start-up time.

For highest processing speed at optimized power consumption an internal PLL can be selected to supply the CPU with up to 56MHz operation frequency from an external 4MHz resonator. The result is a minimum instruction cycle time of 17.8ns going together with excellent EMI behavior. An on-chip clock modulation circuit significantly reduces emission peaks in the frequency spectrum. The emitted power is minimized by the on-chip voltage regulator that reduces the internal CPU voltage. A flexible clock tree allows to select suitable operation frequencies for peripheral resources independent of the CPU speed.

*1: These devices are under development and specification is preliminary. These products under development may change its specification without notice.

Note: F²MC is the abbreviation of FUJITSU Flexible Microcontroller.

For the information for microcontroller supports, see the following web site.

This web site includes the "**Customer Design Review Supplement**" which provides the latest cautions on system development and the minimal requirements to be checked to prevent problems before the system development.

MB96350 Series

■ FEATURES

Feature	Description
Technology	<ul style="list-style-type: none">• 0.18µm CMOS
CPU	<ul style="list-style-type: none">• F²MC-16FX CPU• Up to 56 MHz internal, 17.8 ns instruction cycle time• Optimized instruction set for controller applications (bit, byte, word and long-word data types; 23 different addressing modes; barrel shift; variety of pointers)• 8-byte instruction execution queue• Signed multiply (16-bit × 16-bit) and divide (32-bit/16-bit) instructions available
System clock	<ul style="list-style-type: none">• On-chip PLL clock multiplier (x1 - x25, x1 when PLL stop)• 3 MHz - 16 MHz external crystal oscillator clock (maximum frequency when using ceramic resonator depends on Q-factor).• Up to 56 MHz external clock• 32-100 kHz subsystem quartz clock• 100kHz/2MHz internal RC clock for quick and safe startup, oscillator stop detection, watchdog• Clock source selectable from main- and subclock oscillator (part number suffix "W") and on-chip RC oscillator, independently for CPU and 2 clock domains of peripherals.• Low Power Consumption - 13 operating modes : (different Run, Sleep, Timer modes, Stop mode)• Clock modulator
On-chip voltage regulator	<ul style="list-style-type: none">• Internal voltage regulator supports reduced internal MCU voltage, offering low EMI and low power consumption figures
Low voltage reset	<ul style="list-style-type: none">• Reset is generated when supply voltage is below minimum.
Code Security	<ul style="list-style-type: none">• Protects ROM content from unintended read-out
Memory Patch Function	<ul style="list-style-type: none">• Replaces ROM content• Can also be used to implement embedded debug support
DMA	<ul style="list-style-type: none">• Automatic transfer function independent of CPU, can be assigned freely to resources
Interrupts	<ul style="list-style-type: none">• Fast Interrupt processing• 8 programmable priority levels• Non-Maskable Interrupt (NMI)
Timers	<ul style="list-style-type: none">• Three independent clock timers (23-bit RC clock timer, 23-bit Main clock timer, 17-bit Sub clock timer)• Watchdog Timer

Feature	Description
CAN	<ul style="list-style-type: none"> Supports CAN protocol version 2.0 part A and B ISO16845 certified Bit rates up to 1 Mbit/s 32 message objects Each message object has its own identifier mask Programmable FIFO mode (concatenation of message objects) Maskable interrupt Disabled Automatic Retransmission mode for Time Triggered CAN applications Programmable loop-back mode for self-test operation
USART	<ul style="list-style-type: none"> Full duplex USARTs (SCI/LIN) Wide range of baud rate settings using a dedicated reload timer Special synchronous options for adapting to different synchronous serial protocols LIN functionality working either as master or slave LIN device
I ² C	<ul style="list-style-type: none"> Up to 400 kbps Master and Slave functionality, 8-bit and 10-bit addressing
A/D converter	<ul style="list-style-type: none"> SAR-type 10-bit resolution Signals interrupt on conversion end, single conversion mode, continuous conversion mode, stop conversion mode, activation by software, external trigger or reload timer
Reload Timers	<ul style="list-style-type: none"> 16-bit wide Prescaler with $1/2^1$, $1/2^2$, $1/2^3$, $1/2^4$, $1/2^5$, $1/2^6$ of peripheral clock frequency Event count function
Free Running Timers	<ul style="list-style-type: none"> Signals an interrupt on overflow, supports timer clear upon match with Output Compare (0, 4), Prescaler with 1, $1/2^1$, $1/2^2$, $1/2^3$, $1/2^4$, $1/2^5$, $1/2^6$, $1/2^7$, $1/2^8$ of peripheral clock frequency
Input Capture Units	<ul style="list-style-type: none"> 16-bit wide Signals an interrupt upon external event Rising edge, falling edge or rising & falling edge sensitive
Output Compare Units	<ul style="list-style-type: none"> 16-bit wide Signals an interrupt when a match with 16-bit I/O Timer occurs A pair of compare registers can be used to generate an output signal.
Programmable Pulse Generator	<ul style="list-style-type: none"> 16-bit down counter, cycle and duty setting registers Interrupt at trigger, counter borrow and/or duty match PWM operation and one-shot operation Internal prescaler allows 1, $1/4$, $1/16$, $1/64$ of peripheral clock as counter clock and Reload timer overflow as clock input Can be triggered by software or reload timer

MB96350 Series

Feature	Description
Real Time Clock	<ul style="list-style-type: none"> Can be clocked either from sub oscillator (devices with part number suffix "W"), main oscillator or from the RC oscillator Facility to correct oscillation deviation of Sub clock or RC oscillator clock (clock calibration) Read/write accessible second/minute/hour registers Can signal interrupts every half second/second/minute/hour/day Internal clock divider and prescaler provide exact 1s clock
External Interrupts	<ul style="list-style-type: none"> Edge sensitive or level sensitive Interrupt mask and pending bit per channel Each available CAN channel RX has an external interrupt for wake-up Selected USART channels SIN have an external interrupt for wake-up
Non Maskable Interrupt	<ul style="list-style-type: none"> Disabled after reset Once enabled, can not be disabled other than by reset. Level high or level low sensitive Pin shared with external interrupt 0.
External bus interface	<ul style="list-style-type: none"> 8-bit or 16-bit bidirectional data Up to 24-bit addresses 6 chip select signals Multiplexed address/data lines Wait state request External bus master possible Timing programmable
I/O Ports	<ul style="list-style-type: none"> Virtually all external pins can be used as general purpose I/O All push-pull outputs (except when used as I²C SDA/SCL line) Bit-wise programmable as input/output or peripheral signal Bit-wise programmable input enable Bit-wise programmable input levels: Automotive / CMOS-Schmitt trigger / TTL Bit-wise programmable pull-up resistor Bit-wise programmable output driving strength for EMI optimization
Packages	<ul style="list-style-type: none"> 64-pin plastic LQFP M23/M24

Feature	Description
Flash Memory	<ul style="list-style-type: none">• Supports automatic programming, Embedded Algorithm• Write/Erase/Erase-Suspend/Resume commands• A flag indicating completion of the algorithm• Number of erase cycles: 10,000 times• Data retention time: 20 years• Erase can be performed on each sector individually• Sector protection• Flash Security feature to protect the content of the Flash• Low voltage detection during Flash erase

MB96350 Series

■ PRODUCT LINEUP

Features		MB96V300B	MB96(F)35x
Product type		Evaluation sample	Flash product: MB96F35x Mask ROM product: MB9635x
Product options			
YS	NA		Low voltage reset persistently on / Single clock devices
RS			Low voltage reset can be disabled / Single clock devices
YW			Low voltage reset persistently on / Dual clock devices
RW			Low voltage reset can be disabled / Dual clock devices
AS			No CAN / Low voltage reset can be disabled / Single clock devices
AW			No CAN / Low voltage reset can be disabled / Dual clock devices
Flash/ ROM	RAM		
96KB	8KB	ROM/Flash memory emulation by external RAM, 92KB internal RAM	MB96F353R, MB96F353A ^{*1}
160KB	8KB		MB96F355R, MB96F355A ^{*1}
288KB	12KB		MB96F356Y, MB96F356R, MB96F356A
Package	BGA416	FPT-64P-M23/24	
DMA	16 channels	4 channels	
USART	10 channels	4 channels	
I ² C	2 channels	1 channel	
A/D Converter	40 channels	15 channels	
A/D Converter Reference Voltage switch	yes	No	
16-bit Reload Timer	6 channels + 1 channel (for PPG)	4 channels + 1 channel (for PPG)	
16-bit Free-Running Timer	4 channels	4 channels (2 channels with external clock input pin)	
16-bit Output Compare	12 channels	4 channels	
16-bit Input Capture	12 channels	6 channels (plus 2 channels for LIN USART)	
16-bit Programmable Pulse Generator	20 channels	20 channels	
CAN Interface	5 channels	MB96F35xA: no MB96F353R/F355R: 1 channel MB96F356Y/R: 2 channels	
External Interrupts	16 channels	13 channels	
Non-Maskable Interrupt		1 channel	

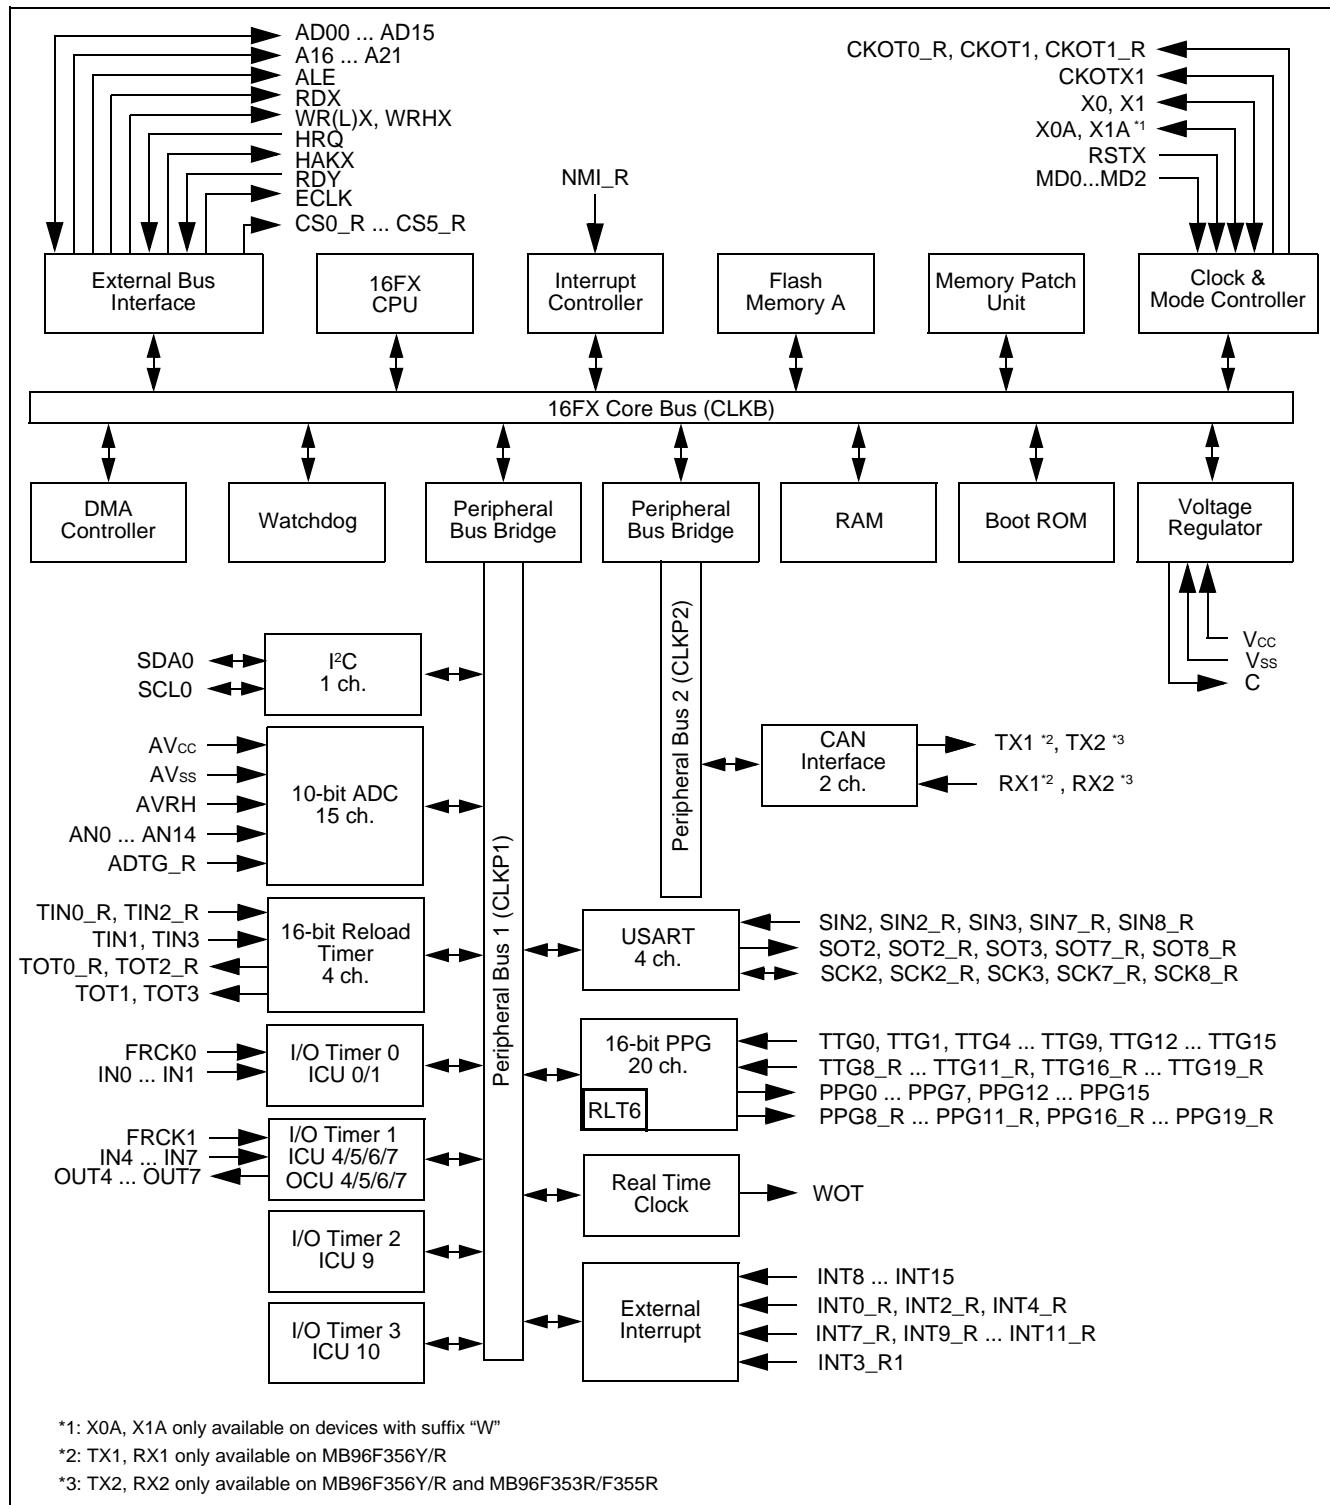

Features	MB96V300B	MB96(F)35x
Real Time Clock		1
I/O Ports	136	49 for part number with suffix "W", 51 for part number with suffix "S"
External bus interface		Yes
Chip select		6 signals
Clock output function		2 channels
Low voltage reset		Yes
On-chip RC-oscillator		Yes

*1: These devices are under development and specification is preliminary. These products under development may change its specification without notice.

■ BLOCK DIAGRAM

Block diagram of MB96(F)35x

■ PIN ASSIGNMENTS

Pin assignment of MB96(F)35x

*1: Devices with suffix W: X0A, X1A

Devices with suffix S: P04_0, P04_1

*2: TX1, RX1 only available on MB96F356Y/R

*3: TX2, RX2 only available on MB96F356Y/R and MB96F353R/F355R

(FPT-64P-M23/M24)

Remark:

MB96(F)35x products are pin-compatible to F²MC-16LX family MB90350 series.

MB96350 Series

■ PIN FUNCTION DESCRIPTION

Pin Function description (1 of 2)

Pin name	Feature	Description
ADn	External bus	External bus interface (multiplexed mode) address output and data input/output
ADTG_R	ADC	Relocated A/D converter trigger input
ALE	External bus	External bus Address Latch Enable output
An	External bus	External bus address output
ANn	ADC	A/D converter channel n input
AV _{CC}	Supply	Analog circuits power supply
AVRH	ADC	A/D converter high reference voltage input
AV _{SS}	Supply	Analog circuits power supply
C	Voltage regulator	Internally regulated power supply stabilization capacitor pin
CKOTn	Clock output function	Clock Output function n output
CKOTn_R	Clock output function	Relocated Clock Output function n output
CKOTXn	Clock output function	Clock Output function n inverted output
ECLK	External bus	External bus clock output
CSn_R	External bus	Relocated External bus chip select n output
FRCKn	Free Running Timer	Free Running Timer n input
HAKX	External bus	External bus Hold Acknowledge
HRQ	External bus	External bus Hold Request
INn	ICU	Input Capture Unit n input
INTn	External Interrupt	External Interrupt n input
INTn_R	External Interrupt	Relocated External Interrupt n input
MDn	Core	Input pins for specifying the operating mode.
NMI_R	External Interrupt	Relocated Non-Maskable Interrupt input
OUTn	OCU	Output Compare Unit n waveform output
Pxx_n	GPIO	General purpose IO
PPGn	PPG	Programmable Pulse Generator n output
PPGn_R	PPG	Relocated Programmable Pulse Generator n output
RDX	External bus	External bus interface read strobe output
RDY	External bus	External bus interface external wait state request input
RSTX	Core	Reset input

Pin Function description (2 of 2)

Pin name	Feature	Description
RXn	CAN	CAN interface n RX input
SCKn	USART	USART n serial clock input/output
SCKn_R	USART	Relocated USART n serial clock input/output
SCLn	I ² C	I ² C interface n clock I/O input/output
SDAn	I ² C	I ² C interface n serial data I/O input/output
SINn	USART	USART n serial data input
SINn_R	USART	Relocated USART n serial data input
SOTn	USART	USART n serial data output
SOTn_R	USART	Relocated USART n serial data output
TINn	Reload Timer	Reload Timer n event input
TINn_R	Reload Timer	Relocated Reload Timer n event input
TOTn	Reload Timer	Reload Timer n output
TOTn_R	Reload Timer	Relocated Reload Timer n output
TTGn	PPG	Programmable Pulse Generator n trigger input
TTGn_R	PPG	Relocated Programmable Pulse Generator n trigger input
TXn	CAN	CAN interface n TX output
V _{cc}	Supply	Power supply
V _{ss}	Supply	Power supply
WOT	RTC	Real Timer clock output
WRHX	External bus	External bus High byte write strobe output
WRLX/WRX	External bus	External bus Low byte / Word write strobe output
X0	Clock	Oscillator input
X0A	Clock	Subclock Oscillator input (only for devices with suffix "W")
X1	Clock	Oscillator output
X1A	Clock	Subclock Oscillator output (only for devices with suffix "W")

MB96350 Series

■ PIN CIRCUIT TYPE

Pin circuit types

FPT-64P-M23/24	
Pin no.	Circuit type ^{*1}
1	Supply
2	G
3 to 15	I
16,17	H

■ SERIAL PROGRAMMING COMMUNICATION INTERFACE

USART pins for Flash serial programming (MD[2:0] = 010)

MB96F35x		
Pin number	USART Number	Normal function
LQFP-64		
9	USART2	SIN2
10		SOT2
11		SCK2
34	USART3	SIN3
35		SOT3
36		SCK3
26	USART7	SIN7_R
25		SOT7_R
24		SCK7_R
29	USART8	SIN8_R
28		SOT8_R
27		SCK8_R

Note: If a Flash programmer and its software needs to use a handshaking pin, Fujitsu suggests to the tool vendor to support at least port P00_1 on pin 25.

If handshaking is used by the tool but P00_1 is not available in customer's application, Fujitsu suggests to the customer to check the tool manual or to contact the tool vendor for alternative handshaking pins.

■ HANDLING DEVICES

Special care is required for the following when handling the device:

- Latch-up prevention
- Unused pins handling
- External clock usage
- Unused sub clock signal
- Notes on PLL clock mode operation
- Power supply pins (V_{CC}/V_{SS})
- Crystal oscillator circuit
- Turn on sequence of power supply to A/D converter and analog inputs
- Pin handling when not using the A/D converter
- Notes on energization
- Stabilization of power supply voltage
- Serial communication

1. Latch-up prevention

CMOS IC chips may suffer latch-up under the following conditions:

- A voltage higher than V_{CC} or lower than V_{SS} is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between V_{CC} pins and V_{SS} pins.

Latch-up may increase the power supply current dramatically, causing thermal damages to the device.

2. Unused pins handling

Unused input pins can be left open when the input is disabled (corresponding bit of Port Input Enable register PIER = 0).

Leaving unused input pins open when the input is enabled may result in misbehavior and possible permanent damage of the device. They must therefore be pulled up or pulled down through resistors. To prevent latch-up, those resistors should be more than $2\text{ k}\Omega$.

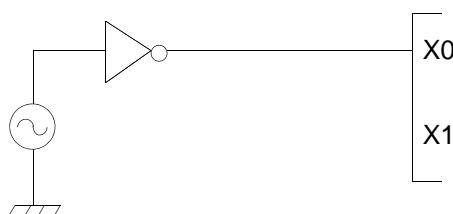

Unused bidirectional pins can be set either to the output state and be then left open, or to the input state with either input disabled or external pull-up/pull-down resistor as described above.

3. External clock usage

The permitted frequency range of an external clock depends on the oscillator type and configuration. See AC Characteristics for detailed modes and frequency limits. Single and opposite phase external clocks must be connected as follows:

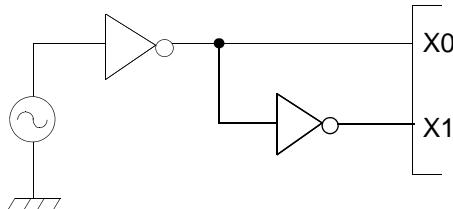

1. Single phase external clock

- When using a single phase external clock, X0 pin must be driven and X1 pin left open.

2. Opposite phase external clock

- When using an opposite phase external clock, X1 (X1A) must be supplied with a clock signal which has the opposite phase to the X0 (X0A) pins.

4. Unused sub clock signal

If the pins X0A and X1A are not connected to an oscillator, a pull-down resistor must be connected on the X0A pin and the X1A pin must be left open.

5. Notes on PLL clock mode operation

If the PLL clock mode is selected and no external oscillator is operating or no external clock is supplied, the microcontroller attempts to work with the free oscillating PLL. Performance of this operation, however, cannot be guaranteed.

6. Power supply pins (Vcc/Vss)

It is required that all Vcc-level as well as all Vss-level power supply pins are at the same potential. If there is more than one Vcc or Vss level, the device may operate incorrectly or be damaged even within the guaranteed operating range.

Vcc and Vss must be connected to the device from the power supply with lowest possible impedance.

As a measure against power supply noise, it is required to connect a bypass capacitor of about 0.1 μ F between Vcc and Vss as close as possible to Vcc and Vss pins.

7. Crystal oscillator and ceramic resonator circuit

Noise at X0, X1 pins or X0A, X1A pins might cause abnormal operation. It is required to provide bypass capacitors with shortest possible distance to X0, X1 pins and X0A, X1A pins, crystal oscillator (or ceramic resonator) and ground lines, and, to the utmost effort, that the lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board art work surrounding X0, X1 pins and X0A, X1A pins with a ground area for stabilizing the operation.

It is highly recommended to evaluate the quartz/MCU or resonator/MCU system at the quartz or resonator manufacturer, especially when using low-Q resonators at higher frequencies.

8. Turn on sequence of power supply to A/D converter and analog inputs

It is required to turn the A/D converter power supply (AVcc, AVRH, AVRL) and analog inputs (ANn) on after turning the digital power supply (Vcc) on.

It is also required to turn the digital power off after turning the A/D converter supply and analog inputs off. In this case, the voltage must not exceed AVRH or AVcc (turning the analog and digital power supplies simultaneously on or off is acceptable).

9. Pin handling when not using the A/D converter

It is required to connect the unused pins of the A/D converter as AVcc = Vcc, AVss = AVRH = AVRL = Vss.

10. Notes on Power-on

To prevent malfunction of the internal voltage regulator, supply voltage profile while turning the power supply on should be slower than 50 μ s from 0.2 V to 2.7 V.

11. Stabilization of power supply voltage

If the power supply voltage varies acutely even within the operation safety range of the Vcc power supply voltage, a malfunction may occur. The Vcc power supply voltage must therefore be stabilized. As stabilization guidelines, the power supply voltage must be stabilized in such a way that Vcc ripple fluctuations (peak to peak value) in the commercial frequencies (50 to 60 Hz) fall within 10% of the standard Vcc power supply voltage and the transient fluctuation rate becomes 0.1V/μs or less in instantaneous fluctuation for power supply switching.

12. Serial communication

There is a possibility to receive wrong data due to noise or other causes on the serial communication.

Therefore, design a printed circuit board so as to avoid noise.

Consider receiving of wrong data when designing the system. For example apply a checksum and retransmit the data if an error occurs.

MB96350 Series

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

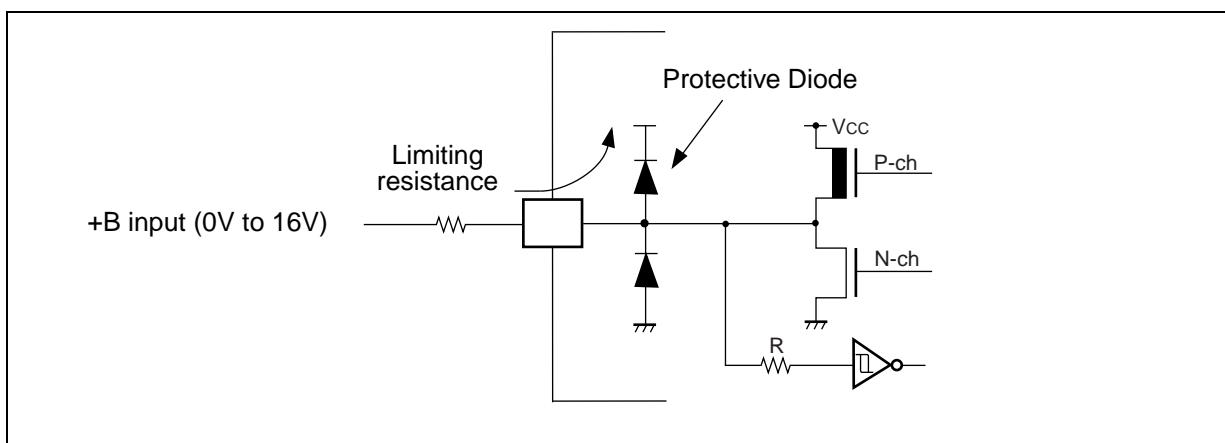

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage	V _{CC}	V _{SS} - 0.3	V _{SS} + 6.0	V	
	AV _{CC}	V _{SS} - 0.3	V _{SS} + 6.0	V	V _{CC} = AV _{CC} ^{*1}
AD Converter voltage references	AVRH, AVRL	V _{SS} - 0.3	V _{SS} + 6.0	V	AV _{CC} ≥ AVRH, AV _{CC} ≥ AVRL, AVRH > AVRL, AVRL ≥ AV _{SS}
Input voltage	V _I	V _{SS} - 0.3	V _{SS} + 6.0	V	V _I ≤ V _{CC} + 0.3V ^{*2}
Output voltage	V _O	V _{SS} - 0.3	V _{SS} + 6.0	V	V _O ≤ V _{CC} + 0.3V ^{*2}
Maximum Clamp Current	I _{CLAMP}	-4.0	+4.0	mA	Applicable to general purpose I/O pins ^{*3}
Total Maximum Clamp Current	Σ I _{CLAMP}	-	40	mA	Applicable to general purpose I/O pins ^{*3}
"L" level maximum output current	I _{OL1}	-	15	mA	Normal outputs with driving strength set to 5mA
"L" level average output current	I _{OLAV1}	-	5	mA	Normal outputs with driving strength set to 5mA

"H" level average overall output current	ΣI _{OHAV1}	-	-50	mA	Normal outputs
Permitted Power dissipation (Flash devices) ^{*4}	P _D	-	320 ^{*5}	mW	T _A =105°C
		-	640 ^{*5}	mW	T _A =85°C
		-	800 ^{*5}	mW	T _A =75°C
		-	400 ^{*5}	mW	T _A =125°C, no Flash program/erase ^{*6}
		-	560 ^{*5}	mW	T _A =115°C, no Flash program/erase ^{*6}
Operating ambient temperature	T _A	0	+70	°C	MB96V300B
		-40	+105		
		-40	+125		^{*6}
Storage temperature	T _{STG}	-55	+150	°C	

*1: AV_{CC} and V_{CC} must be set to the same voltage. It is required that AV_{CC} does not exceed V_{CC} and that the voltage at the analog inputs does not exceed AV_{CC} neither when the power is switched on.

*2: V_i and V_o should not exceed $V_{cc} + 0.3$ V. V_i should also not exceed the specified ratings. However if the maximum current to/from a input is limited by some means with external components, the I_{CLAMP} rating supersedes the V_i rating. Input/output voltages of standard ports depend on V_{cc} .

- *3:
 - Applicable to all general purpose I/O pins (P_{nn_m})
 - Use within recommended operating conditions.
 - Use at DC voltage (current)
 - The $+B$ signal should always be applied a limiting resistance placed between the $+B$ signal and the microcontroller.
 - The value of the limiting resistance should be set so that when the $+B$ signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
 - Note that when the microcontroller drive current is low, such as in the power saving modes, the $+B$ input potential may pass through the protective diode and increase the potential at the V_{cc} pin, and this may affect other devices.
 - Note that if a $+B$ signal is input when the microcontroller power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
 - Note that if the $+B$ input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the Power reset (except devices with persistent low voltage reset in internal vector mode).

- Sample recommended circuits:

*4: The maximum permitted power dissipation depends on the ambient temperature, the air flow velocity and the thermal conductance of the package on the PCB.

The actual power dissipation depends on the customer application and can be calculated as follows:

$$P_D = P_{IO} + P_{INT}$$

$P_{IO} = \sum (V_{OL} * I_{OL} + V_{OH} * I_{OH})$ (IO load power dissipation, sum is performed on all IO ports)

$P_{INT} = V_{cc} * (I_{cc} + I_A)$ (internal power dissipation)

I_{cc} is the total core current consumption into V_{cc} as described in the "DC characteristics" and depends on the selected operation mode and clock frequency and the usage of functions like Flash programming or the clock modulator.

I_A is the analog current consumption into $A_{V_{cc}}$.

*5: Worst case value for a package mounted on single layer PCB at specified T_A without air flow.

*6: Please contact Fujitsu for reliability limitations when using under these conditions.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB96350 Series

2. Recommended Operating Conditions

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V _{CC}	3.0	-	5.5	V	
Smoothing capacitor at C pin	C _S	3.5	4.7 - 10	15	μF	Use a low inductance capacitor (for example X7R ceramic capacitor)

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

Flash Write/Erase current	I _{CCFLASH}	Current for one Flash module	-	15	40	mA	Must be added to all current above	
Input capacitance	C _{IN}	-	-	5	15	pF	Other than C, AV _{CC} , AV _{SS} , AVR _H , AVR _L , V _{CC} , V _{SS}	

* The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32kHz external clock connected to the Sub oscillator. See chapter "Standby mode and voltage regulator control circuit" of the Hardware Manual for further details about voltage regulator control.

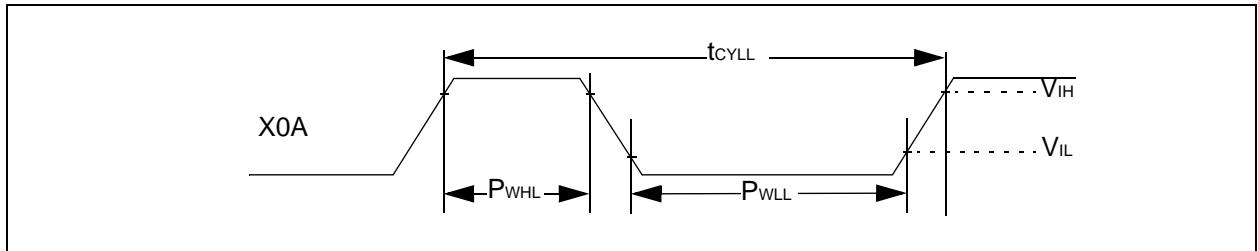

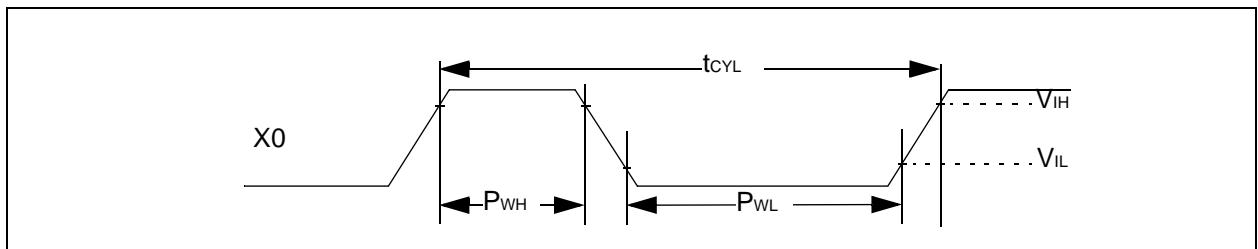

MB96350 Series

4. AC Characteristics

Source Clock timing

($T_A = -40^\circ\text{C}$ to 125°C , $V_{cc} = AV_{cc} = 3.0\text{V}$ to 5.5V , $V_{ss} = AV_{ss} = 0\text{V}$)

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	f_c	X0, X1	3	-	16	MHz	When using a crystal oscillator, PLL off
			0	-	16	MHz	When using an opposite phase external clock, PLL off
			3.5	-	16	MHz	When using a crystal oscillator or opposite phase external clock, PLL on
Clock frequency	f_{FCI}	X0	0	-	56	MHz	When using a single phase external clock in "Fast Clock Input mode", PLL off
			3.5	-	56	MHz	When using a single phase external clock in "Fast Clock Input mode", PLL on
Clock frequency	f_{CL}	X0A, X1A	32	32.768	100	kHz	When using an oscillation circuit
			0	-	100	kHz	When using an opposite phase external clock
		X0A	0	-	50	kHz	When using a single phase external clock
Clock frequency	f_{CR}	-	50	100	200	kHz	When using slow frequency of RC oscillator
			1	2	4	MHz	When using fast frequency of RC oscillator
PLL Clock frequency	f_{CLKVCO}	-	64	-	200	MHz	Permitted VCO output frequency of PLL (CLKVCO)
PLL Phase Jitter	T_{PSKEW}	-	-	-	± 5	ns	For CLKMC (PLL input clock) $\geq 4\text{MHz}$
Input clock pulse width	P_{WH}, P_{WL}	X0,X1	8	-	-	ns	Duty ratio is about 30% to 70%
Input clock pulse width	P_{WHL}, P_{WLL}	X0A,X1A	5	-	-	μs	

MB96350 Series

Internal Clock timing

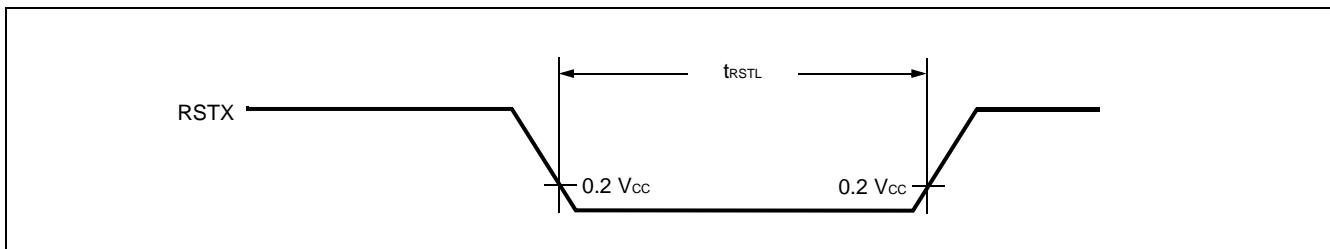

($T_A = -40^{\circ}\text{C}$ to 125°C , $V_{CC} = AV_{CC} = 3.0\text{V}$ to 5.5V , $V_{SS} = AV_{SS} = 0\text{V}$)

Parameter	Symbol	Core Voltage Settings				Unit	Remarks		
		1.8V		1.9V					
		Min	Max	Min	Max				
Internal System clock frequency (CLKS1 and CLKS2)	f_{CLKS1}, f_{CLKS2}	0	92	0	96	MHz	Others than below		
		0	88	0	96	MHz	MB96F356		
Internal CPU clock frequency (CLKB), internal peripheral clock frequency (CLKP1)	f_{CLKB}, f_{CLKP1}	0	52	0	56	MHz			
Internal peripheral clock frequency (CLKP2)	f_{CLKP2}	0	28	0	32	MHz			

External Reset timing

($T_A = -40^\circ\text{C}$ to 125°C , $V_{CC} = AV_{CC} = 3.0\text{V}$ to 5.5V , $V_{SS} = AV_{SS} = 0\text{V}$)

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Reset input time	t_{RSTL}	RSTX	500	-	-	ns	

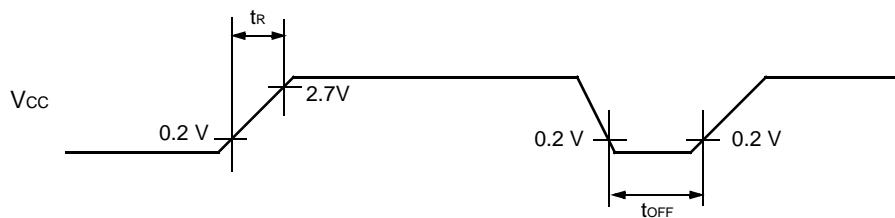

MB96350 Series

Power On Reset timing

($T_A = -40^{\circ}\text{C}$ to 125°C , $V_{\text{CC}} = \text{AV}_{\text{CC}} = 3.0\text{V}$ to 5.5V , $V_{\text{SS}} = \text{AV}_{\text{SS}} = 0\text{V}$)

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Power on rise time	t_R	V_{CC}	0.05	-	30	ms	
Power off time	t_{OFF}	V_{CC}	1	-	-	ms	

If the power supply is changed too rapidly, a power-on reset may occur.
We recommend a smooth startup by restraining voltages when changing the power supply voltage during operation, as shown in the figure below.

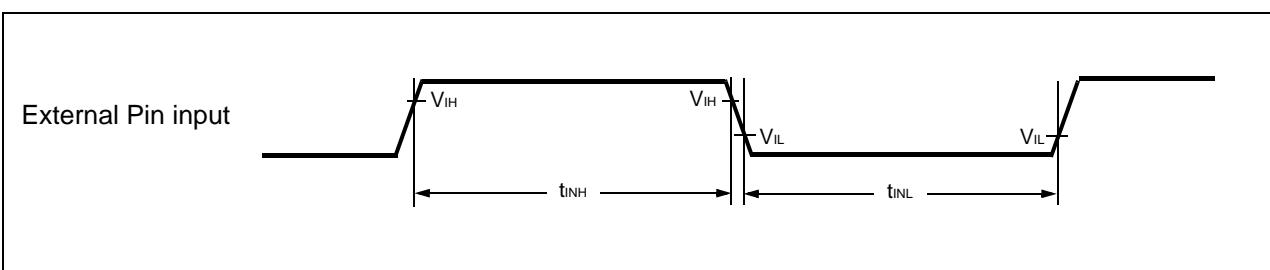

External Input timing

($T_A = -40^{\circ}\text{C}$ to 125°C , $V_{CC} = AV_{CC} = 3.0\text{V}$ to 5.5V , $V_{SS} = AV_{SS} = 0\text{V}$)

Parameter	Symbol	Pin	Condition	Value		Unit	Used Pin input function
				Min	Max		
Input pulse width	t_{INH} t_{INL}	INTn(_R)	—	200	—	ns	External Interrupt
		NMI(_R)					NMI
		Pnn_m		$2*t_{CLKP1} + 200$ ($t_{CLKP1}=1/f_{CLKP1}$)	—	ns	General Purpose IO
		TINn(_R)					Reload Timer
		TTGn(_R)					PPG Trigger input
		ADTG(_R)					AD Converter Trigger
		FRCKn(_R)					Free Running Timer external clock
		INn(_R)					Input Capture

Note : Relocated Resource Inputs have same characteristics

MB96350 Series

External Bus timing

Note: The values given below are for an I/O driving strength $IO_{drive} = 5\text{mA}$. If IO_{drive} is 2mA , all the maximum output timing described in the different tables must then be increased by 10ns.

Basic Timing

($T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$, $V_{cc} = 5.0\text{ V} \pm 10\%$, $V_{ss} = 0.0\text{ V}$, $IO_{drive} = 5\text{mA}$, $C_L = 50\text{pF}$)

MB96350 Series

USART timing

WARNING: The values given below are for an I/O driving strength $IO_{drive} = 5mA$. If IO_{drive} is $2mA$, all the maximum output timing described in the different tables must then be increased by $10ns$.

($T_A = -40^{\circ}C$ to $125^{\circ}C$, $V_{CC} = 3.0V$ to $5.5V$, $V_{SS} = AV_{SS} = 0V$, $IO_{drive} = 5mA$, $C_L = 50pF$)

Parameter	Symbol	Pin	Condition	$V_{CC} = AV_{CC} = 4.5V$ to $5.5V$		$V_{CC} = AV_{CC} = 3.0V$ to $4.5V$		Unit
				Min	Max	Min	Max	
Serial clock cycle time	t _{SCYCI}	SCKn	Internal Shift Clock Mode	4 t _{CLKP1}	—	4 t _{CLKP1}	—	ns
SCK ↓ → SOT delay time	t _{SLOVI}	SCKn, SOTn		-20	+20	-30	+30	ns
SOT → SCK ↑ delay time	t _{OVSII}	SCKn, SOTn		N*t _{CLKP1} - 20 * ¹	—	N*t _{CLKP1} - 30 * ¹	—	ns
Valid SIN → SCK ↑	t _{IVSII}	SCKn, SINn		t _{CLKP1} + 45	—	t _{CLKP1} + 55	—	ns
SCK ↑ → Valid SIN hold time	t _{SHIXI}	SCKn, SINn		0	—	0	—	ns
Serial clock "L" pulse width	t _{SLSH}	SCKn		t _{CLKP1} + 10	—	t _{CLKP1} + 10	—	ns
Serial clock "H" pulse width	t _{SHSLE}	SCKn	External Shift Clock Mode	t _{CLKP1} + 10	—	t _{CLKP1} + 10	—	ns
SCK ↓ → SOT delay time	t _{SLOVE}	SCKn, SOTn		—	2 t _{CLKP1} + 45	—	2 t _{CLKP1} + 55	ns
Valid SIN → SCK ↑	t _{IVSHE}	SCKn, SINn		t _{CLKP1} /2 + 10	—	t _{CLKP1} /2 + 10	—	ns
SCK ↑ → Valid SIN hold time	t _{SHIXE}	SCKn, SINn		t _{CLKP1} + 10	—	t _{CLKP1} + 10	—	ns
SCK fall time	t _{FE}	SCKn		—	20	—	20	ns
SCK rise time	t _{RE}	SCKn		—	20	—	20	ns

- Notes:
- AC characteristic in CLK synchronized mode.
 - C_L is the load capacity value of pins when testing.
 - Depending on the used machine clock frequency, the maximum possible baud rate can be limited by some parameters. These parameters are shown in "MB96300 Super series HARDWARE MANUAL"
 - t_{CLKP1} is the cycle time of the peripheral clock 1 (CLKP1), Unit : ns

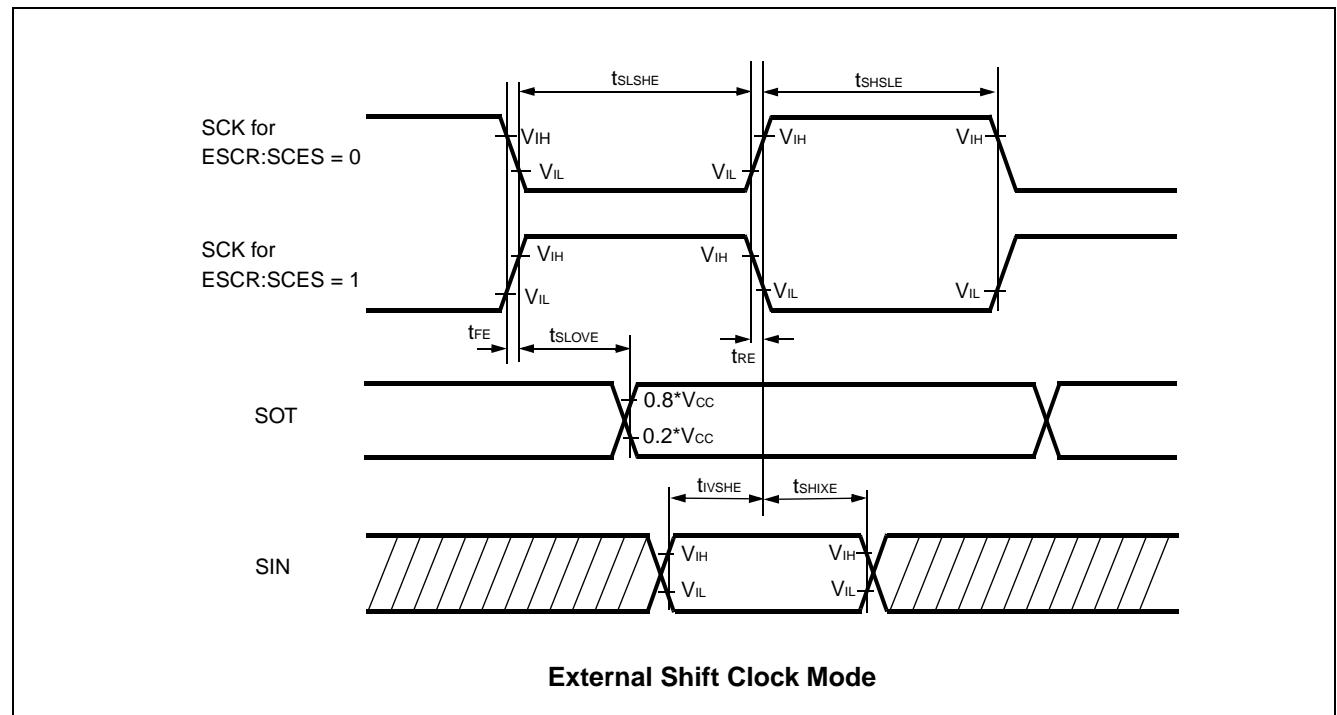

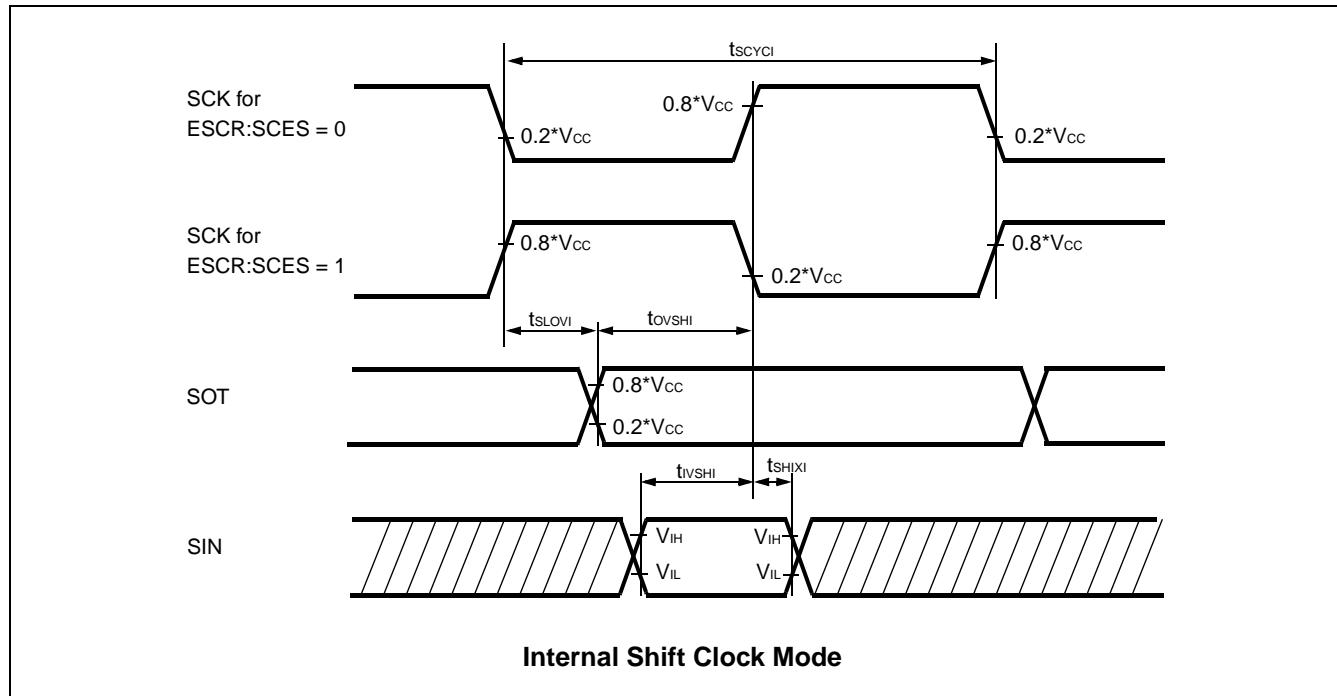

*1: Parameter N depends on t_{SCYCI} and can be calculated as follows:

- if $t_{SCYCI} = 2*k*t_{CLKP1}$, then $N = k$, where k is an integer > 2
- if $t_{SCYCI} = (2*k+1)*t_{CLKP1}$, then $N = k+1$, where k is an integer > 1

Examples:

t _{SCYCI}	N
4*t _{CLKP1}	2
5*t _{CLKP1} , 6*t _{CLKP1}	3
7*t _{CLKP1} , 8*t _{CLKP1}	4
...	...

MB96350 Series

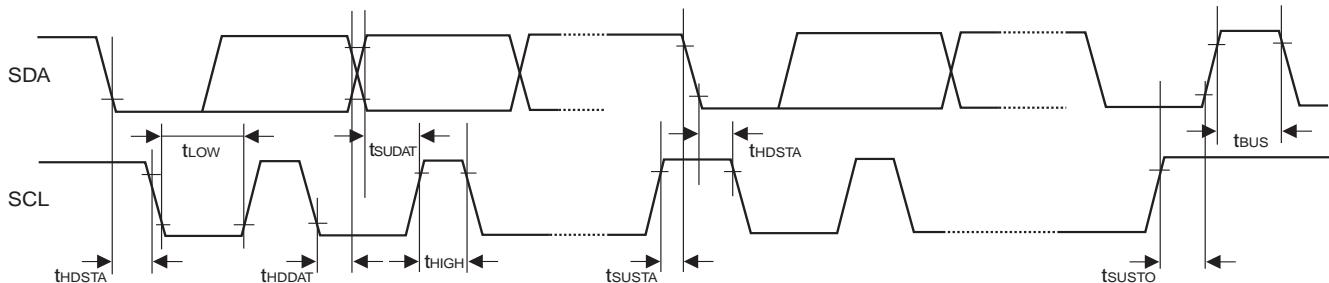

I²C Timing(T_A = -40°C to 125°C, V_{CC} = AV_{CC} = 3.0V to 5.5V, V_{SS} = AV_{SS} = 0V)

Parameter	Symbol	Condition	Standard-mode		Fast-mode* ⁴		Unit
			Min	Max	Min	Max	
SCL clock frequency	f _{SCL}	R = 1.7 kΩ, C = 50 pF ^{*1}	0	100	0	400	kHz
Hold time (repeated) START condition SDA↓→SCL↓	t _{HDSTA}		4.0	—	0.6	—	μs
"L" width of the SCL clock	t _{LOW}		4.7	—	1.3	—	μs
"H" width of the SCL clock	t _{HIGH}		4.0	—	0.6	—	μs
Set-up time for a repeated START condition SCL↑→SDA↓	t _{SUSTA}		4.7	—	0.6	—	μs
Data hold time SCL↓→SDA↓↑	t _{HDDAT}		0	3.45 ^{*2}	0	0.9 ^{*3}	μs
Data set-up time SDA↓↑→SCL↑	t _{SUDAT}		250	—	100	—	ns
Set-up time for STOP condition SCL↑→SDA↑	t _{SUSTO}		4.0	—	0.6	—	μs
Bus free time between a STOP and START condition	t _{BUS}		4.7	—	1.3	—	μs

*1 : R,C : Pull-up resistor and load capacitor of the SCL and SDA lines.

*2 : The maximum t_{HDDAT} have only to be met if the device does not stretch the "L" width (t_{LOW}) of the SCL signal.*3 : A Fast-mode I²C-bus device can be used in a Standard-mode I²C-bus system, but the requirement t_{SUDAT} ≥ 250 ns must then be met.

*4 : For use at over 100 kHz, set the peripheral clock 1 to at least 6 MHz.

Note: The accuracy gets worse as $|\text{AVRH} - \text{AVRL}|$ becomes smaller.

Definition of A/D Converter Terms

Resolution: Analog variation that is recognized by an A/D converter.

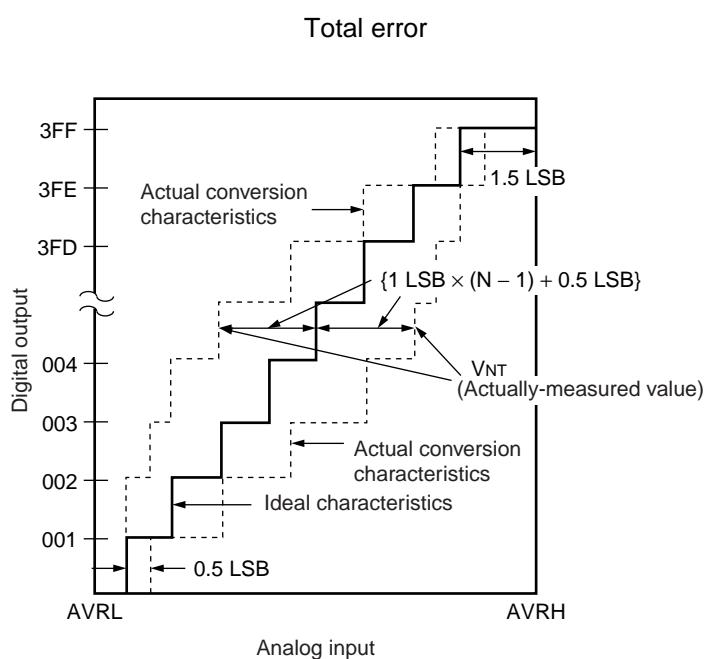

Total error: Difference between the actual value and the ideal value. The total error includes zero transition error, full-scale transition error and nonlinearity error.

Nonlinearity error: Deviation between a line across zero-transition line ("00 0000 0000" <-> "00 0000 0001") and full-scale transition line ("11 1111 1110" <-> "11 1111 1111") and actual conversion characteristics.

Differential nonlinearity error: Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.

Zero reading voltage: Input voltage which results in the minimum conversion value.

Full scale reading voltage: Input voltage which results in the maximum conversion value.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB} = (\text{Ideal value}) \frac{\text{AVRH} - \text{AVRL}}{1024} \text{ [V]}$$

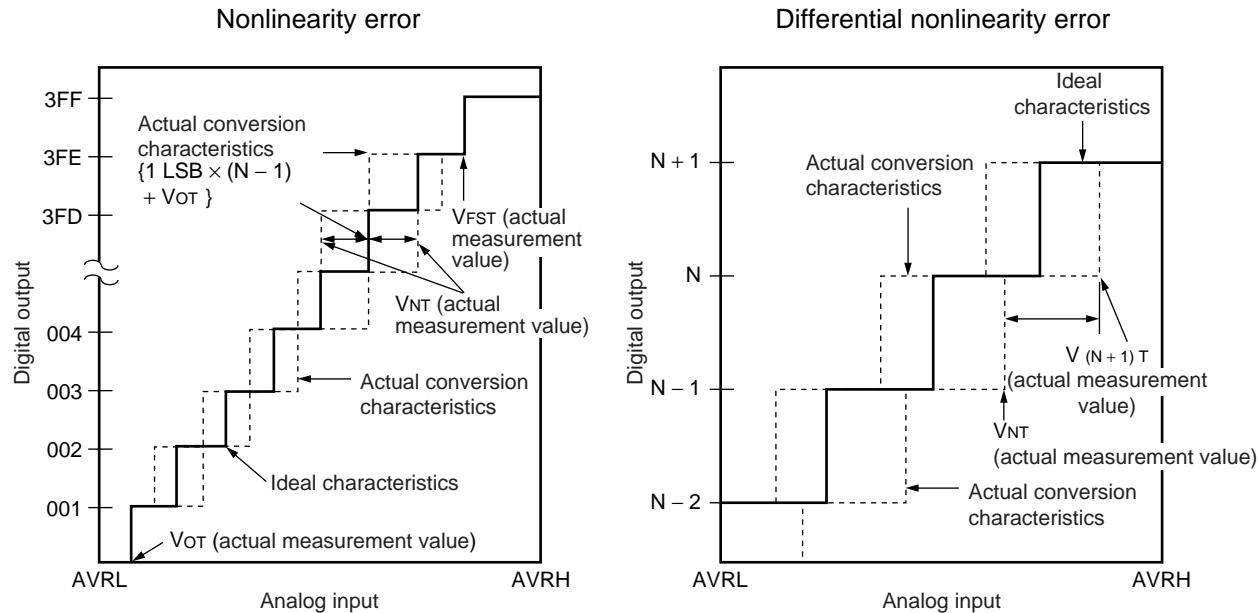

N: A/D converter digital output value

$$V_{OT} \text{ (Ideal value)} = \text{AVRL} + 0.5 \text{ LSB} \text{ [V]}$$

$$V_{FST} \text{ (Ideal value)} = \text{AVRH} - 1.5 \text{ LSB} \text{ [V]}$$

V_{NT} : A voltage at which digital output transitions from (N - 1) to N.

MB96350 Series

$$\text{Nonlinearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential nonlinearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB} \text{ [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

N : A/D converter digital output value

V_{OT} : Voltage at which digital output transits from "000_H" to "001_H."

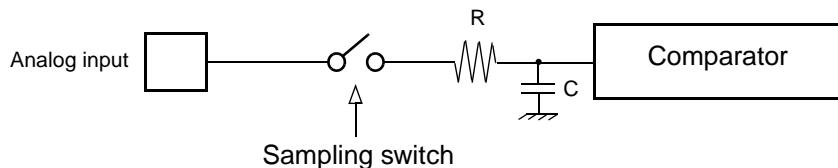

V_{FST} : Voltage at which digital output transits from "3FE_H" to "3FF_H."

Notes on A/D Converter Section

- About the external impedance of the analog input and the sampling time of the A/D converter (with sample and hold circuit):

If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision.

- analog input circuit model:

Reference value:

- C = 8.5 pF (Max)

To satisfy the A/D conversion precision standard, the relationship between the external impedance and minimum sampling time must be considered and then either the resistor value and operating frequency must be adjusted or the external impedance must be decreased so that the sampling time (T_{samp}) is longer than the minimum value. Usually, this value is set to 7τ , where $\tau = RC$. If the external input resistance (R_{ext}) connected to the analog input is included, the sampling time is expressed as follows:

$$T_{\text{samp}} [\text{min}] = 7 \times (R_{\text{ext}} + 2.6\text{k}\Omega) \times C \text{ for } 4.5 \leq AV_{\text{cc}} \leq 5.5$$

$$T_{\text{samp}} [\text{min}] = 7 \times (R_{\text{ext}} + 12.1\text{k}\Omega) \times C \text{ for } 3.0 \leq AV_{\text{cc}} \leq 4.5$$

If the sampling time cannot be sufficient, connect a capacitor of about $0.1 \mu\text{F}$ to the analog input pin.

- About the error

The accuracy gets worse as $|AV_{\text{RH}} - AV_{\text{RL}}|$ becomes smaller.

MB96350 Series

6. Low Voltage Detector characteristics

($T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$, $V_{cc} = AV_{cc} = 3.0\text{V} - 5.5\text{V}$, $V_{ss} = AV_{ss} = 0\text{V}$)

Parameter	Symbol	Value *1		Value *2		Unit	Remarks
		Min	Max	Min	Max		
Stabilization time	$T_{LVDSTAB}$	-	75	-	110	μs	After power-up or change of detection level

Level 13	V_{DL13}	not used		not used			
Level 14	V_{DL14}	not used		not used			
Level 15	V_{DL15}	not used		not used			

*1: valid for all devices except devices listed under “*2”

*2: valid for: MB96F353/F355

CILCR:LVL[3:0] are the low voltage detector level select bits of the CILCR register.

Levels 10 to 15 are not used in this device.

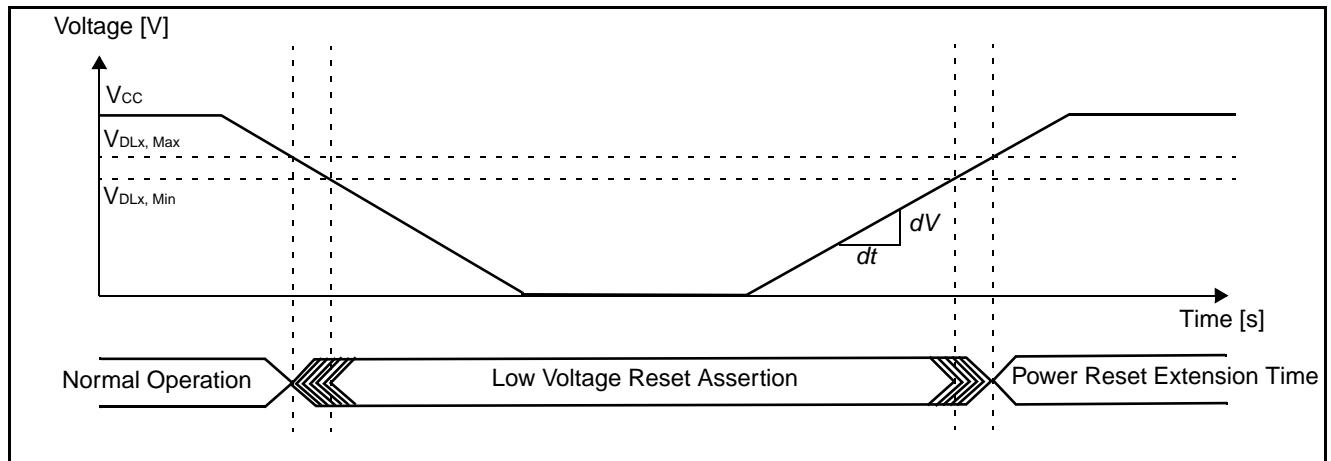

For correct detection, the slope of the voltage level must satisfy $\left| \frac{dV}{dt} \right| \leq 0.004 \frac{V}{\mu\text{s}}$.

Faster variations are regarded as noise and may not be detected.

The functional operation of the MCU is guaranteed down to the minimum low voltage detection level of $V_{cc} = 2.7\text{V}$. The electrical characteristics however are only valid in the specified range (usually down to 3.0V).

Low Voltage Detector Operation

In the following figure, the occurrence of a low voltage condition is illustrated. For a detailed description of the reset and startup behavior, please refer to the corresponding hardware manual chapter.

MB96350 Series

7. FLASH memory program/erase characteristics

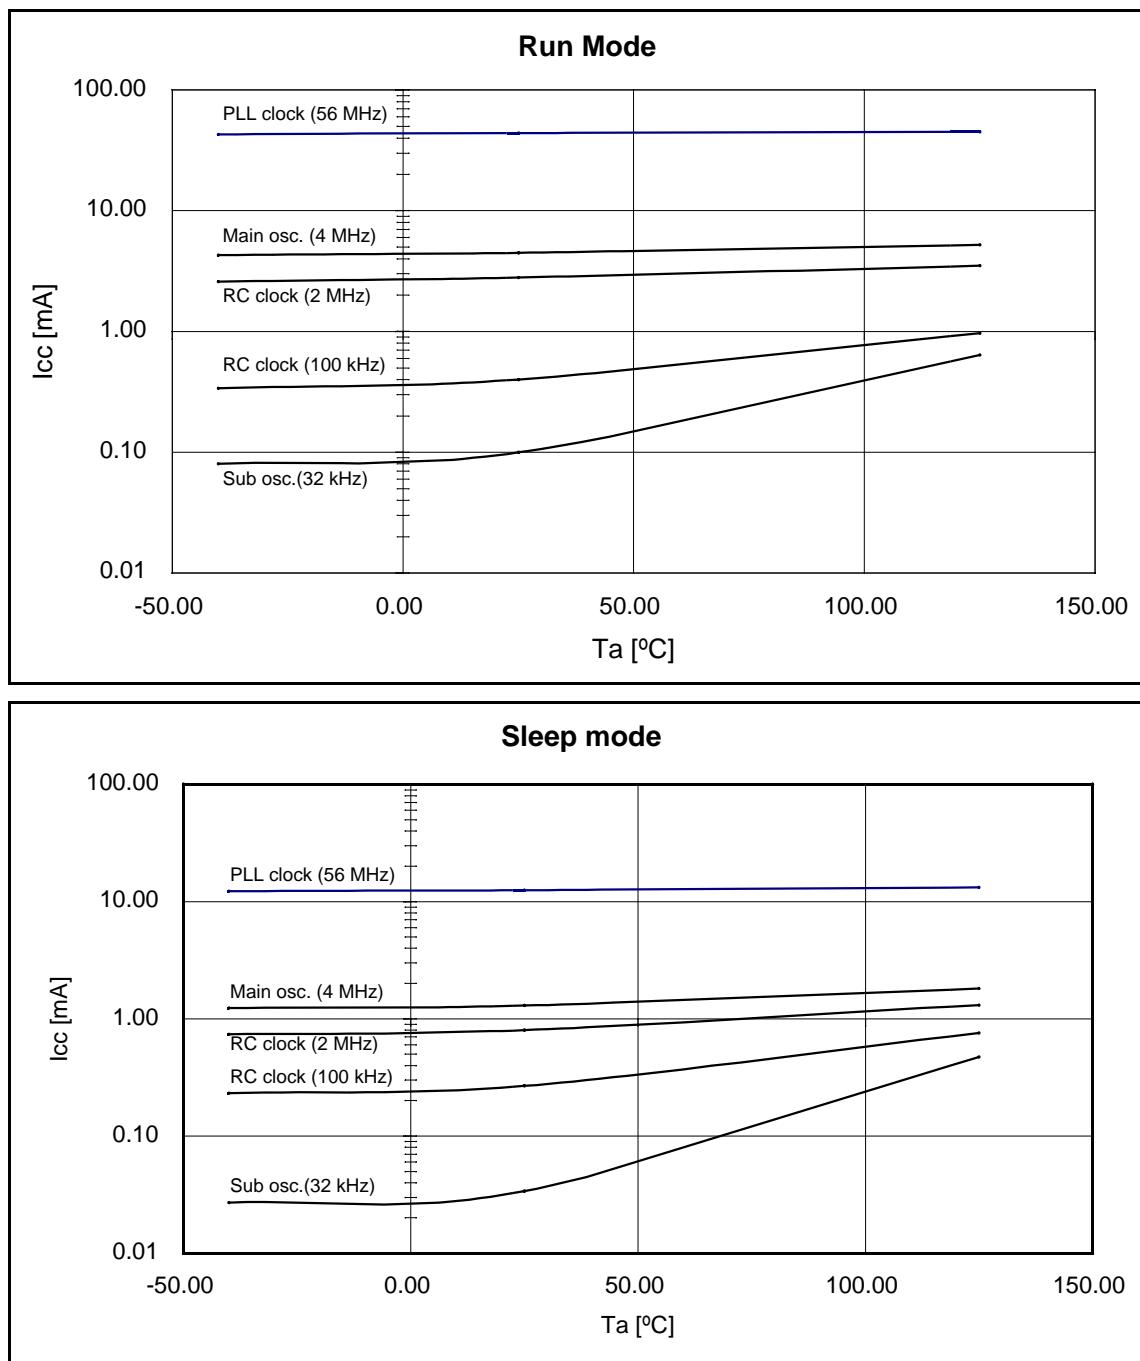

($T_A = -40^\circ\text{C}$ to 105°C , $V_{CC} = AV_{CC} = 3.0\text{V}$ to 5.5V , $V_{SS} = AV_{SS} = 0\text{V}$)

Parameter	Value			Unit	Remarks
	Min	Typ	Max		
Sector erase time	-	0.9	3.6	s	Without erasure pre-programming time
Chip erase time	-	$n \cdot 0.9$	$n \cdot 3.6$	s	Without erasure pre-programming time (n is the number of Flash sector of the device)
Word (16-bit width) programming time	-	23	370	us	Without overhead time for submitting write command
Program/Erase cycle	10 000	-	-	cycle	
Flash data retention time	20	-	-	year	*1

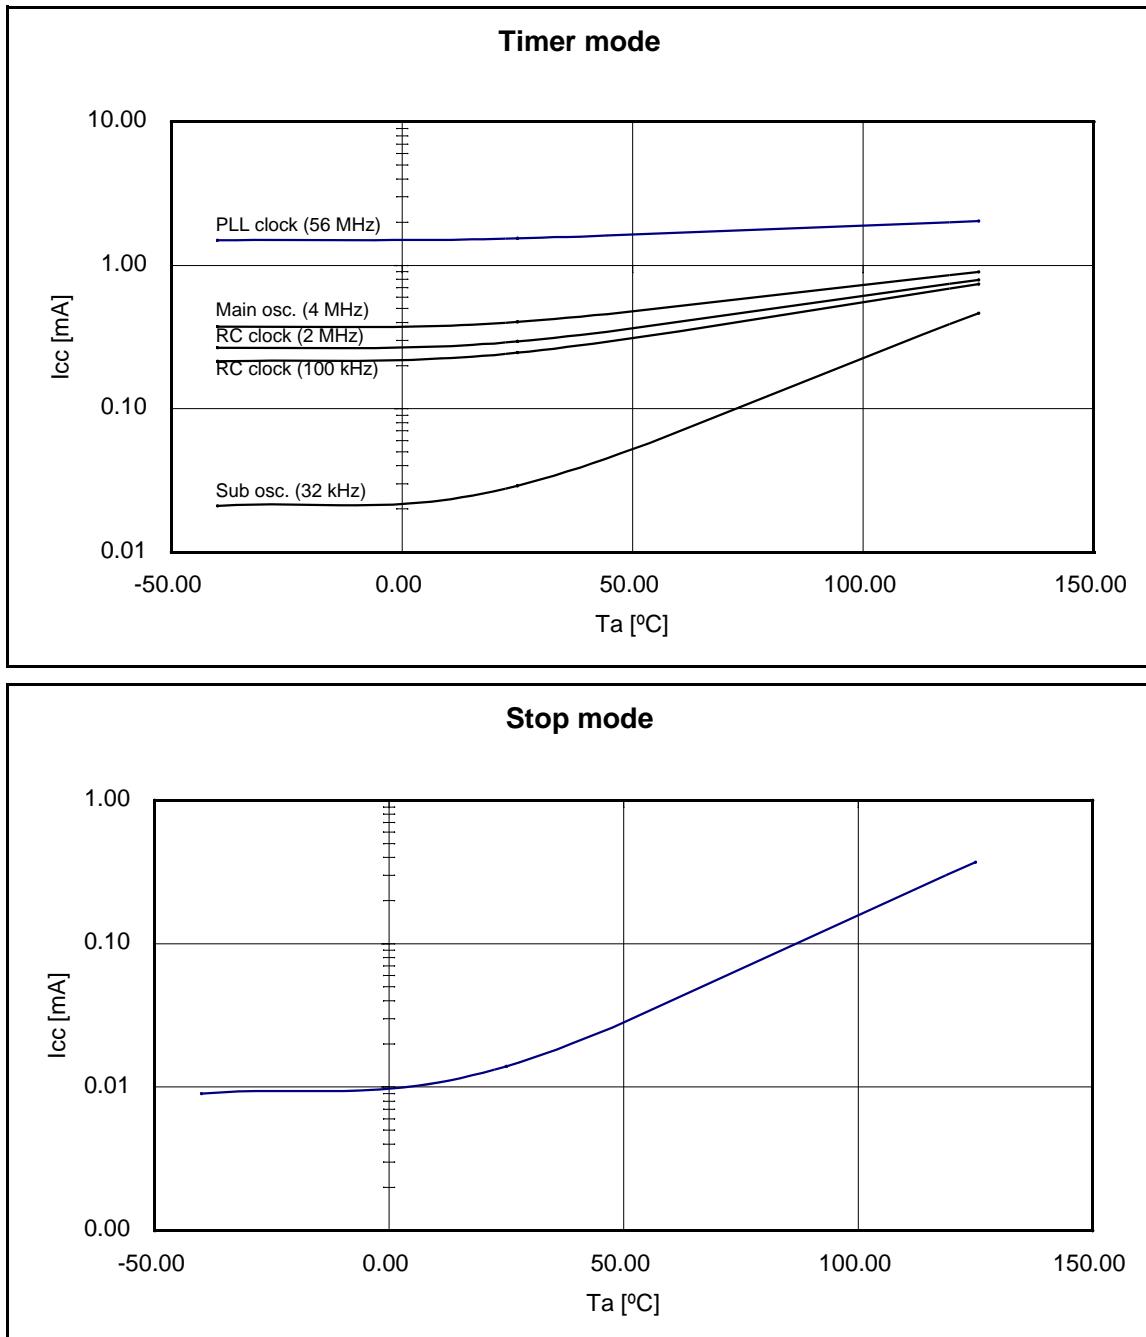

*1: This value was converted from the results of evaluating the reliability of the technology (using Arrhenius equation to convert high temperature measurements into normalized value at 85°C)

■ EXAMPLE CHARACTERISTICS

The diagrams below show the characteristics of one measured sample with typical process parameters.

Revision	Date	Modification
Prelim 1	2007-05-03	Creation
Prelim 2	2007-05-25	Electrical characteristics update
Prelim 3	2007-11-27	Package description is removed from cover page. Typos corrections in product lineup. Product option details added Electrical characteristics update Update of the block diagram Update of the IO map Pin circuit type, LVD characteristics and example characteristics chapters added
Prelim 4	2007-12-20	Update of the block diagram: external bus address lines, clock output function pins, AVRL removed from ADC block, relayout. RAMSTART value is corrected IO map regenerated Memory map and Flash configuration reworked Few typos corrected across the document. Flash bank renaming. Ordering information: package type corrected. IO circuit drawings modified.
Prelim 5	2008-02-04	<ul style="list-style-type: none"> • Reload Timer RLT 6 for PPGs added • Block diagram corrected: ICU2 deleted, TTG2,3 deleted, TTG8,9 added • Pin function description corrected with all existing pin types • I/O circuit type diagrams corrected • Memory map cleaned up • "Flash sector configuration" replaced by corrected "User ROM Memory map for Flash devices" • Parallel Flash programming spec removed • IO map table regenerated: <ul style="list-style-type: none"> - Port register: Naming style corrected - Memory control registers renamed (Main -> A) - addresses after 000BFFh removed • Handling devices: AD converter items added • Absolute maximum ratings: Pd and Ta specified more precisely • Run and Sleep mode currents: more conditions added (1WS settings) • Run mode current spec in 48/24MHz mode corrected • Maximum CLKS1 frequency corrected at 1.8V • External bus timings: missing conditions added and readability improved • Ordering information updated • Typos and formatting corrected

MB96350 Series

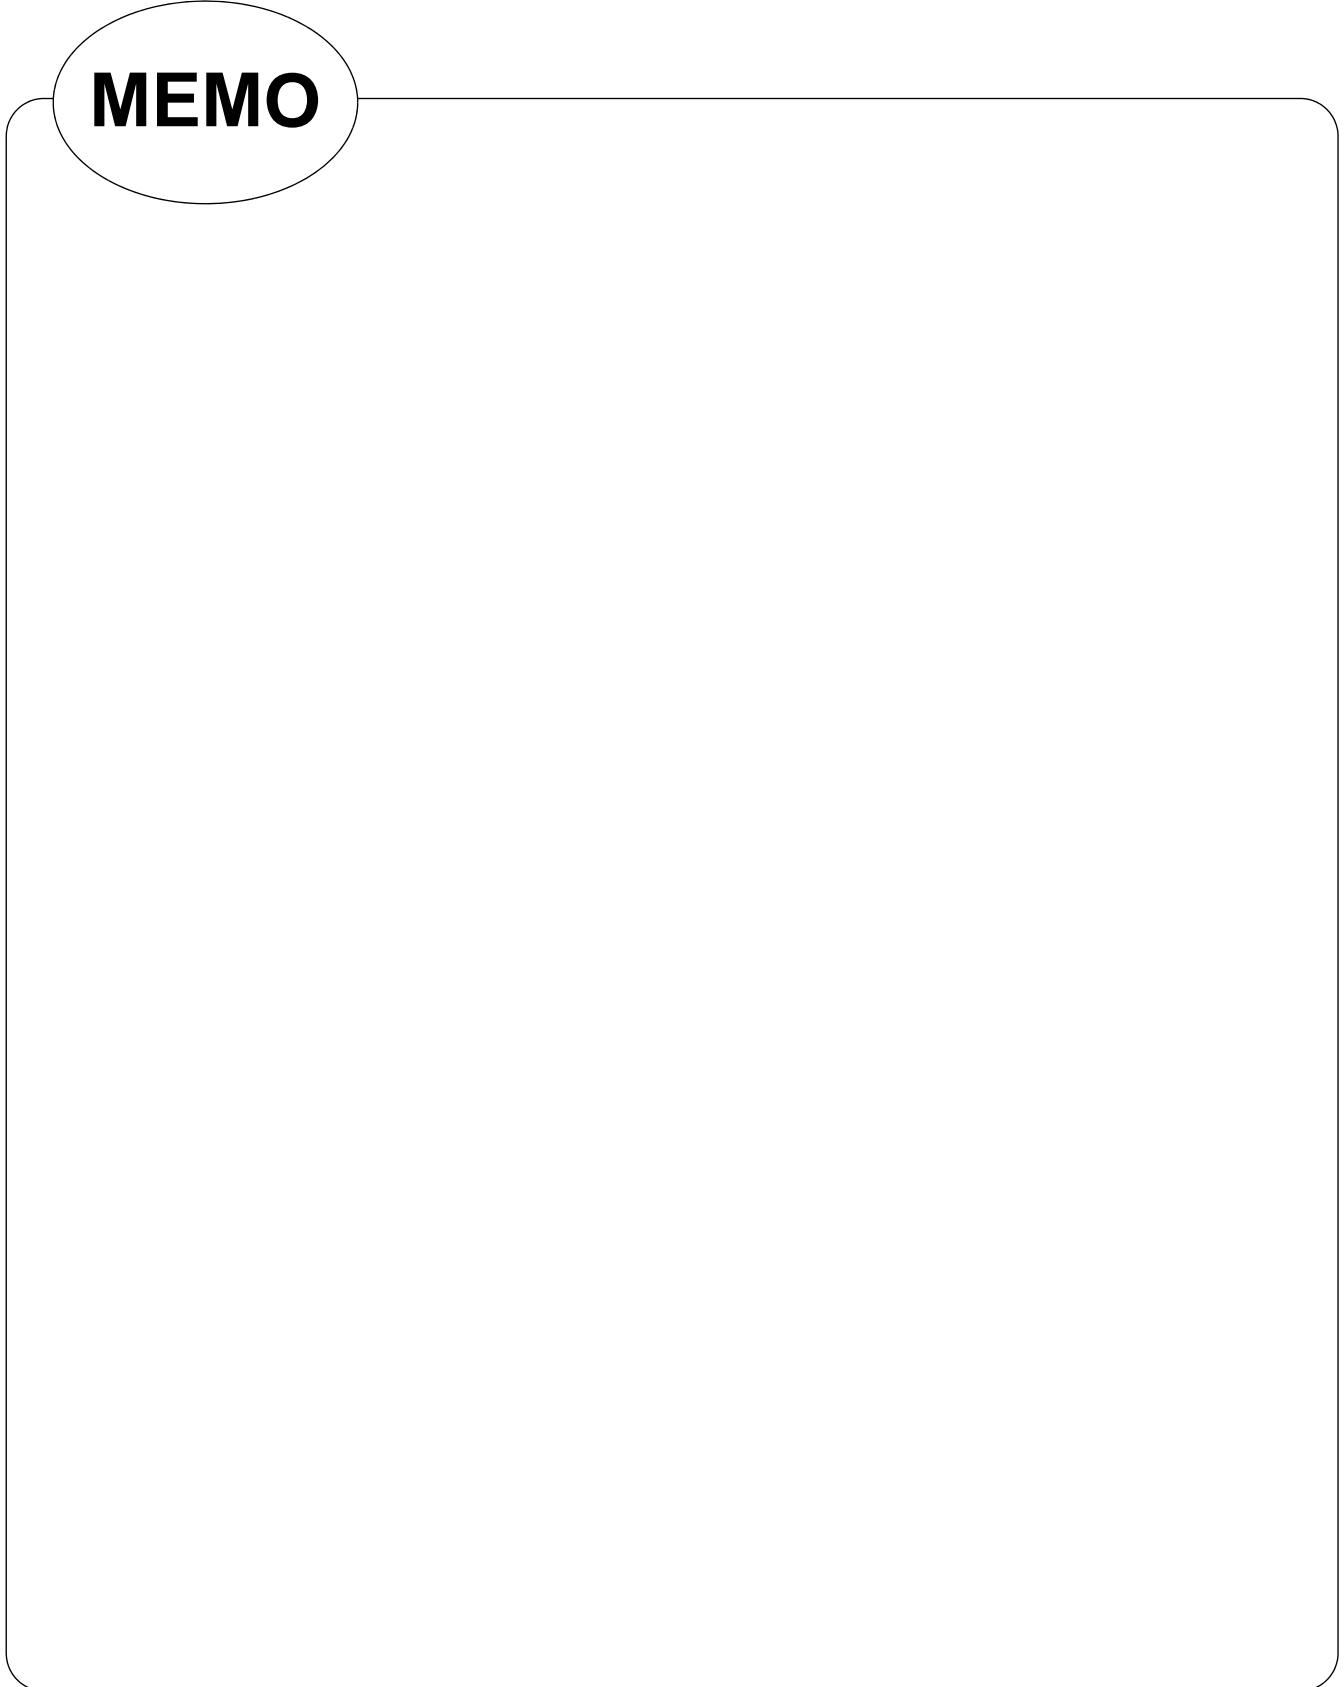

Revision	Date	Modification
6	2009-01-09	<ul style="list-style-type: none">• Format adjusted to official Fujitsu Microelectronics datasheet standard (mainly style changes and official notes and disclaimer added)• Numbering of Electrical Characteristics subchapters automated• CANless devices added (MB96F356A)• I/O map: Added note about reserved registers• Serial programming interface: Note about handshaking pins improved• specified AD converter channel offset to 4LSB• package code of MB96V300 corrected in ordering information• Added voltage condition to pull-up resistance spec• Ordering information: column "Flash/ROM" added, column "Remarks" removed• Official package dimension drawing with additional notes added• Empty pages removed• Handling devices: Notes added about Serial communication and about using ceramic resonators.• Feature list and AC Characteristics: 16MHz maximum frequency is valid for crystal oscillators. For resonators, maximum frequency depends on Q-factor• AC characteristics: PLL phase skew spec added, CLKVCO min=64MHz• VOL3 spec improved: spec valid for 3mA load for full Vcc range• MB96F353/F355 added (under development)• Free running timer (I/O Timer) 2 and 3 added (without clock input pin)• Input capture ICU9 and ICU10 added (without input pin, only for LIN USART)• C-Pin cap spec updated: 4.7uF-10uF capacitor with tolerance permitted• "Preliminary" watermark removed

■ MAIN CHANGES IN THIS EDITION

Page	Section	Change Results
84	■ ELECTRICAL CHARACTERISTICS 5. Analog Digital Converter	Changed the item for "Zero reading voltage" and "Full scale reading voltage".

The vertical lines marked in the left side of the page show the changes.

MEMO

MEMO

MB96350 Series

FUJITSU MICROELECTRONICS LIMITED

Shinjuku Dai-Ichi Seimei Bldg., 7-1, Nishishinjuku 2-chome,
Shinjuku-ku, Tokyo 163-0722, Japan
Tel: +81-3-5322-3329

Specifications are subject to change without notice. For further information please contact each office.

All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
